

Campus CLP Changes To Cat Dev Functionality

This change bulletin provides information about 1) recent changes to Cat Dev functionality and 2) it provides an overview of when one should create a new Cat Dev record instead of creating a new Cat Dev revision (this is covered at the end of this document).

Changes to New Revision of Current Course Button

When you click the New Revision of *Current Course* button, the CCLP will now check to see if the revision

number you are currently on has a value in the *End Year/ Term* field

If the *End Year/Term* field is blank, the CCLP will display a warning dialog indicating that you must first fill in the *End Year/Term* field before you can make a new revision.

About End Year/Term Functionality

Setting an *End Year/Term* field Value:

To set an *End Year/Term* value, click on the *End Year/Term* field and a popup will appear.

Choose an *End Year* from the dropdown list and an *End Term*. In general you will want to set the *End Year/Term* value to be a term prior to the term you want your new proposed revision to begin. To set the *End Year/Term* value, click Continue. The *End Year/Term* value will be written to the *End Year/Term* field. *End Year/Term* values cannot be prior to the *Effective Year/Term* value on a given Cat Dev revision.

Note: if for some reason you want to set an *End Year/Term* value to blank, you can select a blank *End Year* and a blank *End Term* from the respective dropdown lists (the blank *End Year* value appears before the first academic year and the blank *End Term* value appears before Fall).

A screenshot of a modal dialog box titled 'Enter End Year/Term For Course'. It contains two input fields: 'End Year' and 'End Term', each with a dropdown arrow. Below the fields is a note: 'In general, For End Year Term, select a term prior to the effective term you want your new proposed revision to begin. For Example if your new revision begins Fall 2012 (Term Code 2128), make your End Year Term for your previous revision Summer 2012 (Term Code 2124)'. At the bottom are 'Continue' and 'Cancel' buttons.

How and Where the End Year/Term Value is Used By CCLP:

- The *End Year/Term* value appears in the Prev Revs/Sched Devs tabbed area of the Cat Dev screen.

Enrollment	Finals/Intvwrs/Freq	Codes/Misc	AIS Cat	Prev Revs/Sched Devs	X-Listings				
Previous Revisions:									
Total Rev	Ofcr#	#	SubjectCrse#	Alloc	Course Name	Eff YrTrm	End YrTrm	Status	Based on Rev
1	1	/ 1	AMS 015A	100%	Case-Study Calculus I	2114		New	0
0	1	/ 1	AMS 015A	100%	Case-Study Calculus I	2110	2112	Active	

- The *End Year/Term* value appears in Sched Dev in the Course Selection popup. Revisions for any given courses are listed if they are effective during the current academic year or current scheduling year.

AMS 015A Case-Study Calculus I EffYrTerm:2110 EndYrTerm:2112 Rev:0
AMS 015A Case-Study Calculus I EffYrTerm:2114 EndYrTerm: Rev:1

If an *End Yr/Term* value is blank for a given revision and the revision has a status of Active, New, or Reactivated that revision is considered ‘able to be scheduled’ and will appear in the Course Selection dropdown list in Sched Dev (even if there are later revisions that are also effective during that same time period).

No End Year/Term value set for revision 0 so it appears in the list of courses able to be scheduled.

AMS 020 Mathematical Methods for Engineers II EffYrTerm:2088 EndYrTerm: Rev:0
AMS 020 Mathematical Methods for Engineers II EffYrTerm:2098 EndYrTerm: Rev:1

For more information on Sched Dev functionality, please see the change bulletin on modifications to Sched Dev functionality.

Changes to Delete Course Button Functionality

- The Delete Course button now enables one to delete a Cat Dev course revision provided that there are no related Schedule Development history records for that revision number.

Previously the CCLP would not enable one to delete a Cat Dev course revision if there were any related AIS Course History records to the Cat Dev catalog record.

- If a Cat Dev revision has one or more Scheduled Development History records, the CCLP will display a dialog box warning the user that the revision cannot be deleted if it has Schedule Development history.

- If a Cat Dev revision does not have any Schedule Development history and it is the only revision for the Cat Dev record, if you click the Delete Course button you will receive a dialog warning you that if you confirm you wish to delete, the entire Cat Dev record will be deleted.

When to Create a New Cat Dev Record Instead of a New Cat Dev Revision

- If you are re-using a course number and it is an entirely different course altogether, you must create a new Cat Dev record.

For example, if you have a course HIS 123 European History which has later revisions that changed the course number to HIS 124 European History and now you want to re-use the History course number 123 for a course 'Asian History', HIS 123 Asian History needs to be created as a separate Cat Dev record, not as a revision of the Cat Dev record for HIS 123 European History.

Another example would be, suppose you have a Cat Dev record HIS 140 French History that has been cancelled. If you want to reuse the course number HIS 140 for an 'entirely different' course, you must create a new Cat Dev record rather than create a revision of the Cat Dev record that has the cancelled HIS 140 French History course.
